#### **DETAILED ACTION**

##### ***Claim Rejections - 35 USC § 112***

Claim 13 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, there is no description in the specification about determining a remaining parking trajectory.

##### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pawlicki et al (US 7038577) in view of Shimizu et al (US 2002/0041239).

As to claim 11, Pawlicki et al disclosed a object detection system for vehicle to assist the driver in changing lanes or parking the vehicle (col. 1, line 21-22) and the system may be operable in response to a single forward facing camera (i.e. video sensor) to monitor the lane markings 113e along the road surface and monitor the potential presence of oncoming traffic in an adjacent lane or lanes. Once the presence of oncoming traffic has been established, the lane departure warning system may issue

Art Unit: 2612

an urgent audible warning if the vehicle begins to cross the lane marking 113e.

Furthermore, if the vehicle has already begun to cross into (i.e. intersection with) the oncoming traffic lane before oncoming traffic is detected, the lane departure warning system may issue the urgent warning (i.e. a signal) when oncoming traffic is detected (col. 25, line 9-20).

Pawlicki et al did not disclose determining an anticipated parking trajectory of the vehicle. However, it is well known in the art to determine an anticipated parking trajectory of a vehicle. Referring to Fig. 6, Shimizu et al teach a parking aid system wherein expected parking trajectory is determined. Therefore, it would have been obvious to one of ordinary skills in the art at the time of the invention to determine an anticipated parking trajectory of the vehicle in Pawlicki's system since it is well known in the art.

As to claim 12, still referring to Fig. 6, Shimizu et al show the subject vehicle position and expected (i.e. final) parking position.

As claim 13, Pawlicki et al or Shimizu et al did not expressly disclose determining a remaining parking trajectory. However, one of ordinary skills in the art clearly recognizes once parking start, it is necessary to determine if the actual parking trajectory departs away original anticipated trajectory in order to insure proper final parking position.

As claim 14, the claim is interpreted and rejected as claim 11.

As claim 15, the claim is interpreted and rejected as claim 11.

As claim 16, the claim is interpreted and rejected as claim 11.

As claim 17, the claim is interpreted and rejected as claim 11.

As claim 18, the claim is interpreted and rejected as claim 11.

As to claim 19, Shimizu et al teach a controller 1 including a microcomputer.

As claim 20, the claim is interpreted and rejected as claim 11.
